UGREEN Hackathon 2026 on AI NAS — Round 1 Project Proposal

Skill Name: cinevault-roughcut-director | **Track:** Unleash Your Creativity | **Substantive Response Word Count:** 336 words (<= 500 words limit)

1. What does your Skill do? (one sentence)

cinevault-roughcut-director orchestrates five UGREEN AI NAS experts to turn raw project photos, video footage, field audio, production scripts, and music stems into a timecoded rough-cut edit decision sheet and checksum-verified media vault.

2. Who is your target user, and what is their problem?

Filmmakers, video editors, and creative teams store terabytes of multi-camera shoots on NAS drives, but waste hours manually hunting across separate photo, video, audio, document, and file apps before editing can begin.

3. What is your solution?

An approval-gated Uliya orchestration Skill that discovers matching visual shots, subtitles, reference tracks, interview transcripts, and script clearances across NAS domains, compiles a Markdown Edit Decision Sheet, and consolidates non-duplicate selects.

4. What is the main user flow?

The user provides a project theme, date window, and workspace scope; reviews discovered media, transcripts, and duplicate reports; approves album creation and Markdown sheet saving; and confirms final tagging and vault consolidation.

5. How is your idea different from existing tools or common AI solutions?

Cloud AI editors require uploading massive raw footage off-device, whereas cinevault-roughcut-director runs locally on UGREEN AI NAS across five native domain experts with cryptographic deduplication, zero path fabrication, and strict approval gates.

6. Which UGREEN AI NAS features does your Skill use, and at which step?

Stage 1 uses Album search, EXIF, OCR, VLM, and conditional albums; Stage 2 uses Video/Music search and subtitles; Stage 3 uses Document reconciliation and Knowledge audio transcription; Stage 4 uses Filesystem/Filemgr deduplication, tagging, and batch move.

7. What is your technical approach?

Built on Uliya catalog v2.0.0, the parent Skill validates user scope and delegates sequentially to photo-agent (ug-photo), media-agent (ug-video, ug-music), document-agent (ug-document), knowledge-agent (ug-knowledge), and file-agent (ug-filesystem, ug-filemgr, file-workflow), enforcing waiting_user, waiting_approval, and empty-result abstention.

8. What have you built so far? What is not built yet? What still needs testing on a NAS?

We built the complete SKILL.md package passing check-skill.mjs (0 errors, 0 warnings) plus an interactive UGOS simulation workbench; live latency tuning and multi-gigabyte batch-move execution still require testing on physical NAS hardware.

9. How will you test your Skill if you become a Finalist?

Core Case 1: end-to-end 4K shoot discovery, transcription, and vault consolidation. Core Case 2: duplicate camera-card detection via scan-dedupe with partial approval cancellation. Edge Case: future date window returning zero matches without fabricated paths.

10. What are the known limits, risks, or outside dependencies of your Skill?

Transcription and VLM speed depend on local NAS model load; state-changing actions pause for user approval; and external cloud AI calls are optional, disabled for private files, and restricted to anonymized metadata.

Excluded Disclosures: Third-Party Components, Open-Source Libraries & AI Tools

Component / Tool	Version	Source URL	License	Principal Use in Project
uliya-skill-kit	0.7.3-en (v2.0.0)	https://ai.ugreen.com/pages/hackathon-starter-kit	UGREEN Official Rules	Capability catalog & static skill checker
